

Infinity

the new generation 

Environmentally sustainable, lightweight,
space efficient loading

***Infinity is the all new aluminium
alloy van racking system***

Infinity modular van racking that delivers bespoke performance

Infinity
the new generation 

Innovative and revolutionary for van fleet operators and van converter engineers.

For its pioneering technological use and understanding of aluminium alloy structures.

For its ability to provide additional operating space effectively, with no compromise to length or depth.

Environmentally friendly throughout; production, assembly, installation, operation, extended new vehicle life cycle and end of life re-cycle.

The F.lli Gentili's manufacturing design engineers have brought to market a paradigm change, which delivers a stylish product that is minimalist in structure, without compromising its strength. Van racking systems - simply cut for a perfect fit.

Discover the considerable advantages of working with F.lli Gentili's Infinity.

Infinity gives you more valuable operating space, more racking, more capacity.

Infinity is an avant-garde product in its' class: more robust and lighter than the traditional steel or combination material racking systems.

This enables customers to increase the on-board consumable commercial load, without compromising the fuel economy or choice of vehicle operated. Infinity offers many commercial benefits, including a class leading value proposition for all van operators.

Infinity new advantages

MORE SPACE

Infinity weighs in at up to 30% less than traditional quality steel racking systems. Load capacity is improved without compromising your carbon dioxide emissions, clearly addressing environmental responsibilities.

KEY ADVANTAGES

Is to make better use of the fuel consumed by maximising the available operating space and load capacity. By removing excessive racking weight you will improve your load performance, which could result in a smaller vehicle for example.

VERSATILE

Infinity, has been designed and manufactured to allow you to engineer precisely the size you require; height, length and depth, to give the right solution for your needs without compromise.

ECO SUSTAINABLE

Infinity is made of aluminium alloy and is designed to be completely recyclable. The Gentili approach of selecting high quality aluminium alloy makes powder coating completely unnecessary. This quality material also provides for the equipment being re-used in future vehicles.

STRONG AND SIMPLE

Infinity comprises of several complex aluminium alloy profiles, specifically designed to interface with a range of panels and couplings. Integrity in strength is guaranteed and simplicity of assembly is assured by design, by Gentili design.

MADE IN ITALY

Designed and manufactured with care, minimalist clean lines, this racking system is not only for vehicle conversions, but may also be applied to static work environments like offices, workshops, warehouses and offshore containers conversions.

CERTIFIED

Working comfortably and safely. Infinity, crash tested according to the ECE R17 standard as approved by TÜV GS to provide improved operator safety in accordance with that standard.

Infinity
the new generation

Infinity is crash test certified, ensuring a safer working environment

Infinity van racking was been crash tested and passed the rigorous ECE R17 requirements.

The company Quality Management System is ISO 9001 certified

TUV/GS certified

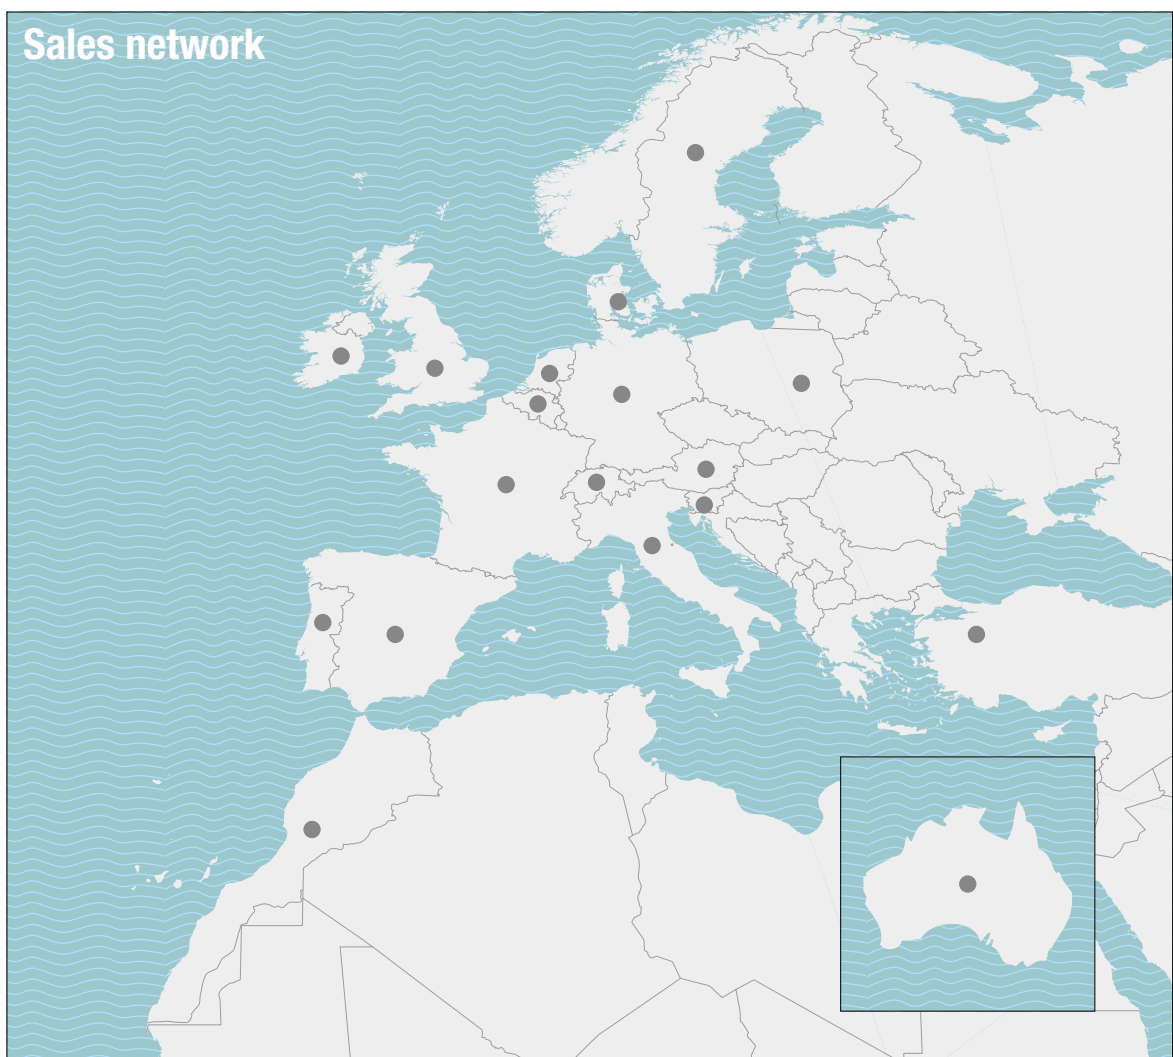

Infinity aluminium extrusions manufacture and production suppliers are accredited with operating standard ISO 14001 (Environmental Management System)
